

AI Opportunities

11/9/2024

Results from feedback survey

15 Responses

1. Which topic has been your favorite?
   - No pattern; Effectively every topic was named by 1-2 students
2. Are there topics you wished we skipped?
   - No clear pattern; ~1/2 responses said none; ~1/2 responses named a topic. No two people named the same topic
3. Topics to add:
   - AI for personal health, psychological impact, recreation of paywalled services, robotics and autonomous systems (e.g. self-driving cars), political economy of AI, impacts on professions, emotional dependence, AI perspectives outside of US/EU/China, Constitutional AI

Suggestions for improvement

- Option to join discussions online [sorry, we think this is a slippery slope]
- "discussions really depend on the people in the group and how engaged they are. Maybe having a recommendation for people not leading discussion to put away laptops could help" [great idea!]
- More events/timelines and practical case studies [we'll think about this]
- Clearer instructions on project components [grading rubrics are on the website]
- More instructor-led content / brief technical lectures

Generally people felt positively about the format, particularly starting with individual written reflections

Notes about proposals

- A number of proposals had writing issues such as inconsistencies in the project plan, lack of alignment between the stated goals/motivations and the planned methodology, terms that were not defined and not understandable
  - We generally left comments about this where applicable and deducted some points, but we were pretty lenient
  - We will not be so lenient with final reports: they should be well-polished and easy to understand for anyone in this class. If we spend 30min reading one page and still can't understand what it is saying, we are not going to try to spend more time figuring it out

Notes about final project

- "Include a brief authorship statement at the end of your paper, explaining how the individual authors contributed to the project and how you used AI. This statement is required even for singly-authored papers, because we want to know whether your project is a collaboration with people outside of the class and your use of AI."
  - Grading rubric: "[Individual per student] This student contributed meaningfully to the project as a whole"
- We will ask you to submit code (if applicable)

Notes about final Q&A

- Final report due:
  - Option 1: Submit report Dec 9 and complete in-person Q&A on Dec 11
  - Option 2: Submit report Dec 14 and complete in-person Q&A on Dec 16

- In-person Q&A
  - Individually for each student
  - 10-15min with Anjalie and Krithika
  - We will ask you questions about your project and relevant material from the class. For example, details about experiments you ran, your thought process to reach particular conclusions, and how your findings relate to other material we read in the class
  - Tailored by authorship statement → It should be easy as long as you did the work and understood related material

Policing:

1. Rob Voigt et al. Language from police body camera footage shows racial disparities in officer respect. PNAS 2017
2. Matt Franchi et al. Detecting disparities in police deployments using dashcam data. FAccT 2023

Healthcare:

1. Emma Pierson et al. An algorithmic approach to reducing unexplained pain disparities in underserved populations. Nature Medicine 2021
2. Wolf et al. The SEE Study: Safety, Efficacy, and Equity of Implementing Autonomous Artificial Intelligence for Diagnosing Diabetic Retinopathy in Youth. Diabetes Care. 2021.[Read just the first few paragraphs before the "RESEARCH DESIGN AND METHODS" section. This is to provide some additional context for #3]
3. Wolf et al. Clinical Implementation of Autonomous Artificial Intelligence Systems for Diabetic Eye Exams: Considerations for Success. Practical Pointers. 2023

Next Unit: AI Opportunities

- We've looked at ways AI can exacerbate social issues, what are ways that AI may be able to mitigate them?

- Questions to consider:
  - Do these papers achieve that goal?
  - What makes this work challenging?
  - What are necessary conditions for this work to be ethically?
    - How do you manage data access and partnerships?
  - How can we ensure this work has the intended impact?
    - Where might good intentions go wrong?
